A stock derivative is any financial instrument for which the underlying asset is the price of an equity. Futures and options are the main types of derivatives on stocks. The underlying security may be a stock index or an individual firm's stock, e.g. single-stock futures.. Stock futures are contracts where the buyer is long, i.e., takes on the obligation to buy on the contract maturity date ...

Origins. The first theoretical model for an index fund was suggested in 1960 by Edward Renshaw and Paul Feldstein, both students at the University of Chicago. While their idea for an "Unmanaged Investment Company" garnered little support, it did start off a sequence of events in the 1960s that led to the creation of the first index fund in the next decade.
