1. Introduction. Phosphorescence, the spin-forbidden radiative decay of an electronically excited state, has been known for a long time. In 1941 Lewis and his coworkers first suggested that the long-lived phosphorescence of fluorescein in rigid media derives from the lowest triplet state. The first unequivocal demonstration of the fact that phosphorescence originates from a triplet state was ...

Application of silica nanoparticles as fillers in the preparation of nanocomposite of polymers has drawn much attention, due to the increased demand for new materials with improved thermal, mechanical, physical, and chemical properties. Recent developments in the synthesis of monodispersed, narrow-size distribution of nanoparticles by sol-gel method provide significant boost to development of ...
